

**IN THE CLAIMS:**

Please enter the attached listing of claims into the application. This listing of claims replaces all prior listing of claims in the application.

**LISTING OF CLAIMS**

1. (Previously Presented) A method of treating or inhibiting atherogenesis in a subject, the method comprising administering to the subject an immunogenic amount of a phosphorylcholine (PC)-enriched preparation from a component of a cell wall polysaccharide of a Streptococcus pathogen, wherein the administration results in the production of IgM antibodies that bind to oxidized low density lipoprotein (OxLDL).
2. (Original) The method of claim 1, wherein the phosphorylcholine (PC)-enriched preparation is administered in combination with an immunostimulant adjuvant.
3. (Cancelled)
4. (Previously Presented) The method of claim 1, wherein the streptococcus is *S. pneumoniae*.
5. (Previously Presented) The method of claim 1, wherein the preparation comprises the cell wall component lipoteichoic acid.
6. (Previously Presented) A method of treating or inhibiting atherogenesis in a subject, the method comprising administering to the subject an immunogenic amount of a phosphorylcholine (PC)-enriched preparation from a component of a cell wall polysaccharide of a Streptococcus pathogen, wherein the administration results in the production of IgM antibodies that bind to oxidized low density lipoprotein (OxLDL) associated with atherogenesis and to phosphorylcholine moieties associated with a cell wall polysaccharide of the Streptococcus pathogen.
7. (Cancelled)

8. (Original) The method of claim 7, wherein the phosphorylcholine (PC)-enriched preparation is administered in combination with an immunostimulant adjuvant.
9. (Original) A method for ameliorating atherosclerosis in a subject, the method comprising administering to the subject antibodies that bind to oxidized low density lipoprotein (OxLDL), in a pharmaceutically acceptable carrier, wherein the antibodies result from an immunogenic response to lipoteichoic acid components of a cell wall polysaccharide of a pathogen.
10. (Original) The method of claim 9, wherein the antibody is monoclonal or polyclonal.
11. (Original) The method of claim 9, wherein the pathogen is streptococcus.
12. (Original) The method of claim 11, wherein the streptococcus is *S. pneumoniae*.
13. (Previously Presented) A method of ameliorating disease caused by atherogenesis in a subject, the method comprising: inducing an IgM immune response in the subject with phosphorylcholine (PC)-enriched preparation from a component of a cell wall polysaccharide of a *Streptococcus* pathogen, wherein the subject generates IgM antibodies that bind to phosphorylcholine associated with OxLDL, and wherein said antibodies prevent the uptake of low density lipoproteins by macrophages, thereby ameliorating disease caused by atherogenesis.
14. (Original) The method of claim 13, wherein the subject is human.
15. (Withdrawn) An anti-atherogenesis or anti-pneumococcal vaccine comprising an immunogenic amount of a phosphorylcholine (PC)-enriched preparation derived from a component of a cell wall polysaccharide of a pathogen, wherein the administration results in the production of antibodies that bind to PC associated with OxLDL, and a physiologically acceptable vaccine vehicle.

16. (Withdrawn) The vaccine of claim 15, wherein said vehicle comprises an effective amount of an immunostimulant adjuvant.
17. (Withdrawn) The vaccine of claim 15, wherein the pathogen is *Streptococcus*.
18. (Withdrawn) An article of manufacture comprising packaging material and, contained within the packaging material, a pharmaceutical composition comprising an immunogenic amount of a phosphorylcholine (PC)-enriched preparation, wherein the packaging material comprises a label or package insert indicating that said composition modulates atherogenesis.
19. (Withdrawn) The article of claim 18, wherein the composition modulates atherogenesis by generating antibodies specific for low density lipoprotein.
20. (Withdrawn) The article of claim 19, wherein the low density lipoprotein is oxidized low density lipoprotein.
21. (Withdrawn) The article of claim 7, wherein the phosphorylcholine (PC)-enriched preparation is derived from *pneumococcus*.
22. (Withdrawn) An article of manufacture comprising packaging material and, contained within the packaging material, a composition comprising an antibody that binds to phosphorylcholine (PC) associated with OXLDL, wherein the packaging material comprises a label or package insert indicating that said antibody can be used for treating atherosclerosis in a subject.
23. (Withdrawn) The article of claim 22, wherein the antibody is generated from a phosphorylcholine (PC)-enriched preparation derived from *S. pneumoniae*.
24. (Withdrawn) An article of manufacture comprising packaging material and, contained within the packaging material, a vaccine that confers immunity to *S. pneumoniae*, wherein the packaging material comprises a label or package insert indicating that said vaccine modulates the activity of OxLDL and can be used for treating or preventing atherogenesis in a subject.

25. (Withdrawn) An article of manufacture comprising packaging material and, contained within the packaging material, an antibody that preferentially binds to *S. pneumoniae*, wherein the packaging material comprises a label or package insert indicating that said antibody can be used for treating a subject having an arteriosclerosis-associated disorder.
26. (Previously Presented) A method for treating or inhibiting atherogenesis in a subject, the method comprising administering to the subject an immunogenic amount of a phosphorylcholine-enriched preparation comprising lipoteichoic acid, wherein the administration results in the production of IgM antibodies that bind to a phosphorylcholine-associated epitope present in oxidized low density lipoprotein (OxLDL).
27. (Original) The method of claim 26, wherein the phosphorylcholine-enriched preparation is derived from a phospholipid.
28. (Original) The method of claim 27, wherein the phospholipid is selected from the group consisting of oxidized forms of 1-palmitoyl-2-arachidonoyl-sn-glycero-3-phosphorylcholine (Ox-PAPC), 1-palmitoyl-2-oxoaleroyl-sn-glycero-3-phosphorylcholine (POVPC), 1-palmitoyl-2-glutaroyl-sn-glycero-3-phosphorylcholine (PGPC), 1-palmitoyl-2-epoxyisoprostane-sn-glycero-3-phosphorylcholine (PEIPC), oxidized 1-stearoyl-2-arachidonoyl-sn-glycero-3-phosphorylcholine (Ox-SAPC), 1-stearoyl-2-oxoaleroyl-sn-glycero-3-phosphorylcholine (SOVPC), 1-stearoyl-2-glutaroyl-sn-glycero-3-phosphorylcholine (SGPC), 1-stearoyl-2-epoxyisoprostane-sn-glycero-3-phosphorylcholine (SEIPC), 1-stearoyl-2-arachidonoyl-sn-glycero-3-phosphorylethanolamine (Ox-SAPE), 1-stearoyl-2-oxoaleroyl-sn-glycero-3-phosphorylethanolamine (SOVPE), 1-stearoyl-2-glutaroyl-sn-glycero-3-phosphorylethanolamine (SGPE), and 1-stearoyl-2-epoxyisoprostane-sn-glycero-3-phosphorylethanolamine (SEIPE).
29. (Original) The method of claim 27, wherein the phospholipid is derived from a cell wall of a pathogen.

30. (Original) The method of claim 29, wherein the pathogen is derived from the genus streptococcus.
31. (Original) The method of claim 30, wherein the streptococcus is S. pneumoniae.
32. (Cancelled).
